AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listing of claims in the present application:

LISTING OF CLAIMS:

Claims 1-23 (canceled).

24. (Presently amended) A resealable transfer set for transferring fluid between a first container having an opening sealed with a pierceable closure and a second container, said transfer set comprising: a general tubular elastomeric fluid transfer valve member mounted on said first container having an open end portion generally coaxially aligned with said opening of said first container and a generally closed portion spaced from said open end portion having a longitudinal slit therethrough, said longitudinal slit being biased to a closed position, and a piercing member telescopically received within said fluid transfer valve member between said open end portion and said generally closed portion generally coaxially aligned with said first container opening, said piercing member having a first relatively sharp piercing end portion opposite said pierceable closure and a second distal end portion opposite said generally closed portion of said transfer valve member, whereby a generally tubular portion of said second container may be driven through said slit in said generally closed portion of said fluid transfer valve member against said second distal end portion of said piercing member, driving said first piercing end portion of said piercing member through said pierceable closure and establishing fluid communication between said first and second containers, wherein said generally tubular elastomeric fluid transfer valve member includes an outwardly tapered tubular portion adjacent

Amendment Dated February 18, 2005
Reply to Office Action of December 14, 2004

said generally closed portion and said piercing member second distal end portion is enlarged to be closely received in said outwardly tapered tubular portion of said fluid transfer valve member releasably retaining said piercing member in said fluid transfer valve member, wherein said transfer set includes a generally tubular luer connector member surrounding said fluid transfer valve member having a lateral opening adjacent said outwardly tapered tubular portion of said elastomeric fluid transfer valve member, permitting said outwardly tapered tubular portion to expand laterally and release said distal end portion of said piercing member.

25. Canceled.

26. Canceled.

27. (Previously presented) The resealable transfer set defined in Claim 24, wherein said piercing member includes a generally longitudinally extending external channel establishing fluid communication between said first and second containers through said fluid transfer valve member.

28. (Previously presented) The resealable transfer set defined in Claim 24, wherein said transfer set includes a generally tubular luer connector member generally surrounding said fluid transfer valve member having a first proximate open end portion mounted on said first container and a second open distal end portion adjacent said generally closed portion of said fluid transfer valve member having a luer threaded portion.

Application No.: 10/723,531
Amendment Dated February 18, 2005
Reply to Office Action of December 14, 2004

29. (Previously presented) The resealable transfer set defined in Claim 28, wherein said generally closed portion of said fluid transfer valve member includes a generally radial annular lip portion overlying a distal end portion of said generally tubular luer connector member retaining and supporting a distal end of said fluid transfer valve member on said first container.

30. (Previously presented) The resealable transfer set defined in Claim 28, wherein said transfer set includes a cup-shaped closure surrounding said generally tubular luer connector member having an open end mounted on said first container and a closed distal end.

31. (Previously presented) The resealable transfer set defined in Claim 24, wherein said transfer set includes a cup-shaped closure surrounding said fluid transfer valve member having an open end mounted on said first container and a closed distal end.

32. (Previously presented) The resealable transfer set defined in Claim 31, wherein said transfer set includes a collar having a first proximate tubular portion surrounding said open end portion of said fluid transfer valve member mounting said fluid transfer set on said first container and a second distal tubular portion surrounding a portion of said cup-shaped closure adjacent said open end of said closure.

Application No.: 10/723,534
Amendment Dated February 18, 2005
Reply to Office Action of December 14, 2004

33. (Previously presented) The resealable transfer set defined in Claim 32, wherein said closure includes a frangible portion surrounded by said second distal tubular portion of said collar.
